

A large, semi-transparent graphic of a logbook is overlaid on the left side of the image. It contains a grid of numbered rows (31-44) with columns for options A, B, C, and D, each represented by a circle. A blue and yellow pencil is shown pointing to the circle for option B in row 41.

	1937	Das 19h às 8.00h e fim de semana todo o dia	
	Building Type	Hot Water Use Habits	Year of Construction of the Heating System
	Family House	several persons take a shower daily	
	Number of Floors	Ventilation Use Habits	Energy Bill
	3	during heating period short airing daily	6490 €/a
	Number of Residential Units		
	1		
	Living Space Area		

Timing and sequencing

Attractive and motivating

User Influence

Even your behaviour influences energy use. Here are some pointers to lower your total energy use.

Short and intensive ventilation: Tilted windows hardly provide fresh air, but they cool walls and rooms down. Correct intensive ventilation should be provided 2 to 3 times a day for about 4 to 5 minutes, with open windows and doors in all rooms. This ensures the necessary air exchange.

Keep blinds and curtains closed: Keep blinds and curtains closed at night to prevent heat from escaping on cold nights.

Insulate windows: If you insulate draughty windows afterwards, you avoid CO₂. The investment in sealing tape is worth it: you save a lot of heating costs.

Costs for hot water: 12 % of the energy consumption is used just to heat water. This is clearly noticeable on your heating bill for central hot water preparation. Cold hand washing, showers instead of bathing and economy shower heads and perlaters help to save hot water.

The Portuguese Renovation Roadmap envisages an improvement from efficiency class F to the best class A+ in four steps. As the building envelop needs refurbishment, the first step envisages insulation measures. When the boiler needs to be exchanged it is replaced by a biomass boiler. Energy costs drop by 88 per cent.

- Positive response
- Useful functionalities
- Homeowners are motivated by the iBRoad Renovation Roadmap and Logbook to carry out renovation measures on the building

Manageability

- The iBRoad tools and documents have to be translated to the respective languages
- Automated data transfer between national EPC software and the Logbook
- Improve the navigation within the tools
- Printable copy of the Renovation Roadmap

Content

- Some auditors required more flexibility, more space for comments and descriptions in free text
- Homeowners and auditors regarded a comparison of different variants in the Roadmap as useful

It was very hard to find enough energy auditors willing to participate

Energy auditors and home owners had difficulties to understand the iBRoad tools and concept in English language

The software could be improved via an automatic transfer of data

The iBRoad concept, in general, and the field test will require/ required a lot of extra work for energy auditors

The iBRoad tools could be more user friendly, e.g., with regard to the layout

- Tool language: Tools are ready to be translated into different languages ✓
- Example: Auditors request an example of roadmap and logbook ✗
- Printable Roadmap: Auditors and homeowners wish for a hard copy of the Roadmap ✓
- Interface: Interface for data import from national calculation software to Logbook ✓ - also test in Portugal
- Navigation: Improve navigation in roadmap assistant and logbook ✗

Thank you very much
